## CONCRETE PAVING BLOCKS

Concrete block paving provides a hard surface which is good to look at, comfortable to walk on, extremely durable and easy to maintain. Its performance characteristics make it suitable for the heaviest duty applications, able to support substantial loads and resist shearing and braking forces.

Paving blocks are fully engineered products manufactured in the factory to give consistency and accuracy. The resulting interlocking characteristics of concrete block paving give it a distinct advantage over other forms of surface. Laid on a granular laying course and with an edge restraint, individual blocks interlock with each other to act together, distributing large point loads evenly.

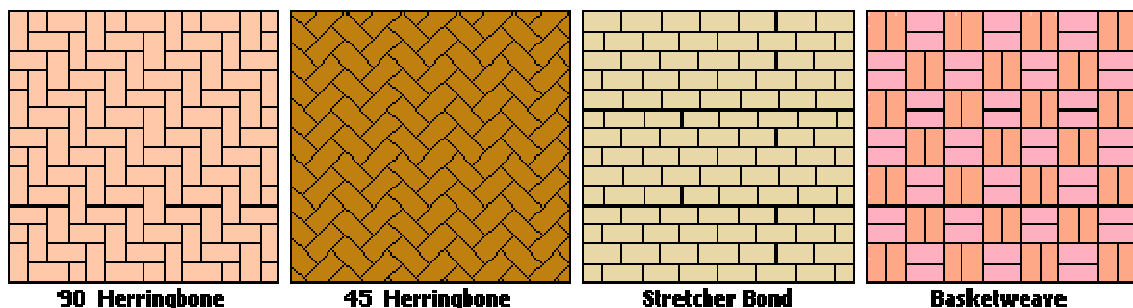

Our concrete paving blocks are available in a variety of shapes, sizes, colours and finishes and can be installed in numerous bonds and laying patterns. This feature enables the use of our paving blocks to delineate space or to create some specific features. Our paving blocks are best suited for application in driveways, patios, pathways & footways, and other private residence areas.

Typical concrete paving block (Product Ref ECP PBT)

### Traditional Paving Patterns

We are constantly introducing new paving patterns to stand out from the crowd. Below are some of our popular traditional paving patterns:

90 Herringbone

45 Herringbone

Stretcher Bond

Basketweave

Also, we have other paving designs that are non-traditional as show in images below.
